NEW YORK.

It can readily be seen that there is open to our merchants a large and profitable field for their manufactures, taking in consideration the fact that at present there is in Mexico a great dearth of building material, the prices of which, under the tariff, were high.

The Exposition grounds will embrace an area of about six hundred acres, and there will be ample space provided for the construction of all varieties of buildings of a desirable nature aside from the official buildings of the national and foreign departments and buildings used by concessionaires, and at the close of the Exposition the material used in the construction of these buildings will find ready and quick sale to railroads, haciendas, merchants, etc.

It is projected that a large hotel on the American plan shall be erected on the grounds for the accommodation of such visitors as prefer the comforts of American civilization, and it is understood that this hotel will remain permanent, it being located in the suburbs, in close proximity to the city.

The Exposition will undoubtedly create a large demand for portable buildings, such as cabins, kiosks, stations, ticket offices, etc., which could be easily transported and readily sold at the close of the Exposition.

As contracts will be made for the erection of all of the main buildings of the Exposition as well as the buildings for concessionaires and others connected with the Exposition, a great and legitimate profit could be realized by the formation of a stock company which could handle all of these contracts, and parties desiring to subscribe to the company could in lieu of cash furnish merchandise and material.

The advantage derived from the liberal privileges granted by the Mexican Government to our merchants on the occasion of this Exposition are such as should be eagerly sought for by those who have the interests of the advancement of American commerce at heart.

In the interest of the exhibitors of the United States a company has been formed at San Francisco, Cal., under the style of the American-Mexican Exposition Company, A. K. Coney, Consul General at San Francisco, president, of whom any further information regarding the Exposition can be obtained.

A NEW BRAND OF GARDEN HOSE.

THE New Jersey Car Spring and Rubber Company, Jersey City, N. J., makers of high-grade vulcanized rubber goods, are out with a new brand of garden hose for the coming season, styled the "New Method." It is offered the trade after much experimenting on the part of the manufacturers, the results showing it to be a hose well adapted to all gardening and hydrant purposes and one worthy the confidence and patronage of dealers generally. It is expected to prove the "coming hose," the company placing the utmost confidence in the excellence of material used, its perfected construction, the correctness of principle involved, its phenomenal strength and the reasonable price at which it is placed upon the market.

The "New Method" is manufactured in four and five ply, and of a special high grade of duck. It is warranted to withstand a pressure of 500 lbs.

The complete line of garden hose offered by the New Jersey Car Spring and Rubber Company, for the season of '95, includes, besides this new brand, nine regular grades, as follows:

"XX Special."—This brand is a very finely-made, high-grade hose, of great strength but very light in weight on account of its purity.

"Special."—Also a high-grade hose, but made very thick and heavy and especially designed for florists' use about greenhouses, etc.

"Extra Para."—A very popular brand, of high grade, manufactured from the finest quality of Para rubber, and suitable for high-pressure and hard usage.

"Emerald."—A fine, high-grade hose for high pressure, and which has been thoroughly tested and experimented with and has shown exceptional wearing qualities. This hose is very attractive in appearance, the covers being a bright green in color, and showy. Though a comparatively new hose, it is one of the most popular with dealers.

Other brands are the "Pearl," "Red Jacket," "Reliable," "Hudson" and "Staple."

The extensive works of the New Jersey Car Spring and Rubber Company, also the principal office and salesrooms, are located at the corner

of Wayne and Brunswick streets and Railroad avenue, Jersey City, N. J., under the management of J. J. Voorhees, secretary and treasurer. Here those desiring further particulars, samples, prices, etc., should address their communications, which will receive prompt and careful attention.

PROOFS FROM SARONY'S SKETCH BOOK is the title of a beautiful portfolio containing twelve selections from Sarony's masterpieces issued by Messrs. A. E. Chasmar & Co., New York, which have already appeared in Sarony's Sketch Book published by the same firm. The plates are printed on India paper, and the exquisite beauty of the combined effort of printer and artist has produced a truly remarkable series of pictures. The Siren represents the nude figure of a girl on a wave, while the Odalisque represents the softness and beauty of the ideal inmate of a harem. The Vase Bearer, after Nonnenbruch, is a highly decorative composition exhibiting a finely-formed damsel bearing vases. All the pictures are from photographs taken from life, and the artist in his selection of models, and in the subsequent treatment of the figures with a view to idealizing their forms, has produced some wonderfully fine studies which will very much enhance his reputation, both as an artist and as a photographer. Although all of the plates are based upon photographs, it must not be imagined that Mr. Sarony is simply a very artistic photographer, for he is an artist as well, and it is a pity that some of his sketches from life that are not based upon photographs are not included in the portfolio, as he possesses a genius for delineating the human form second to none, either in this country or in Europe.
